Q: How to get an element in a list of symbols
I have a list of symbols `s` where each element is a sub list of the type `[Integer]`, and I would like to get the Integer at the end of the list. I can't figure out how to do this, any ideas?
A: The method to the right of a backslash will be applied to the first element of a list: `s = [Symbol["hello"], Symbol["goodbye"], :]` `s[1] #` : Of course, it doesn't make sense to think of this as "`s[1]` is an Integer", but you can access any element by name. So: `s[Symbol[1]] #` : and: `s[[Symbol[1]]] #` : To get the value of an element you need to use `Pick` (which also does pattern matching on its arguments): `Pick[s, Symbol[1]] #` : ISLAMABAD: A
